

## Permanent underwater repairs to all types of propellers now possible

Major repair company Hydrex offers turnkey underwater repair and maintenance solutions to shipowners wherever and whenever they are needed. The company's large and multidisciplinary team helps its clients find the best solution for any problem encountered with their ships below the water line.

Over the years the Hydrex R&D department has continuously improved underwater repair techniques to make it possible for Hydrex diver/technicians to perform permanent repairs on seals, thrusters, rudders and almost any other part of the underwater vessel without the ship needing to go to drydock.

The final step has now been taken by the development of a repair system that allows Hydrex to perform permanent underwater repairs to every type of propeller in dry conditions. All kinds of repair or

maintenance work can be carried out to propellers, twin propellers, variable pitch propellers, azipod and collapsible thrusters.

This is especially important news for supply vessels, navy ships or any vessel under contract or on a location far away from available drydock possibilities. Staying on hire for underwater repairs will save precious time and money.

This new repair system can be transported by air transport to any location around the world from the Hydrex fast response centres within a very short time frame. It can be assembled very quickly (12 hours) on-site.

With the implementation of this technique Hydrex's diver/technicians can now perform permanent repairs to all parts of the underwater ship propulsion system in drydock-like conditions.
